

## Birds Expected to be seen in the Sanctuary

The following bird species have been identified in neighboring waters (within 100 miles of CBNMS) but not yet within the boundaries of the Sanctuary.

**Wandering Albatross** (*Diomedea exulans*)

**Mottled Petrel** (*Pterodroma inexpectata*)

**Stejneger's Petrel** (*Pterodroma longirostris*)

**Parkinson's Petrel** (*Procellaria parkinsoni*)

**Streaked Shearwater** (*Calonectris leucomelas*)

**Greater Shearwater** (*Puffinus gravis*)

**Wedge-tailed Shearwater** (*Puffinus pacificus*)

**Wedge-rumped Storm-petrel** (*Oceanodroma tethys*)

**Tropicbirds** (*Phaethon*)

**Boobies** (*sula sp.*)

**Thick-billed Murre** (*Uria lomvia*)

**Least Auklet** (*Aethia pusilla*)

**Crested Auklet** (*Aethia cristatella*)

Because of their proven ability to reach the North Atlantic, these Southern Hemispheric procellarids seem likely candidates for appearance, within Cordell Bank National Marine Sanctuary.

Black-browed Albatross

Yellow-nosed Albatross

Herald Petrel

White-faced Storm-petrel

Given the amazing species of seabirds we have seen at and beyond Cordell Bank, it seems that any (and every) Pacific albatross and Gadfly Petrel may reasonably show-up here.

Diving Cormorant
